string methods

snippet.js

```
string methods:

name=input("enter your name:")
result=len(name)
print(result)

name=input("enter your name:")
result=name.find("o")
print(result)

name=input("enter the name:")
result=name.find(" ")
print(result)

fruit=input("enter the fruit name:")
result=fruit.isdigit()
print(result)

phone_number=input("enter yor phone #:")
result=phone_number.replace("2","8")
print(result)

alphabets=input("enter your alphabets:")
result=alphabets.isalpha()
print(result)

excercise
1.must be cannot contain more than 12 characters
2.must be cannot contain spaces
3.must be cannot contain digits

name=input("engter your name:")
if len(name)>12:
  print("name cannot contain more than 12 characters")
elif not name.find(" ")==-1:
  print("name cannot contain speces")
elif not name.isalpha():
  print("name cannot cantain numbers ")
else:
  print(f"hi {name}!")
```
